

Working Together to Prepare for a **Security Breach**

It is vital that all departments work together after a security breach and initiate immediate corrective actions to mitigate any damage. Unfortunately, this crisis-mode situation often causes departments to become even more disjointed, and finger-pointing and blaming take center stage.

Learn how to create a plan that will get all business units (and executives) on the same page so that actions and responses are coordinated, timely, and effective.

Introduction of panelists

Working Together to Prepare for a Security Breach

A cyber attack occurs every 11 seconds and costs an average of \$13 million to organizations affected. Attacks are increasingly destructive and now take on many forms. The stakes are simply too high to ignore this information. Today, it's not a matter of if an organization will be targeted by cyber criminals, but when.

This informative webinar does not focus on protecting you from the types of threats you and your team may face, such as Malware, Ransomware, Data Hacks, or Insider Attacks. Instead, it focuses on what to do after a security breach.

Few companies have experience successfully navigating major security crises while in the hot seat.

This webinar will show you exactly what needs to be done in the minutes and hours after a breach, and will help you create a Cyber Security Incident Response Plan (CSIRP) to guide you through this turbulent situation and direct the actions of all impacted departments.

Closing
Q&A and Wrap-up

Learn more about cybersecurity from these specially curated articles. Feel free to ask us any questions about this material or anything else on your mind, in the Q&A portion of our webinar.

Half of businesses can't spot these signs of insider cybersecurity threats

Research suggests that over half of organisations find it difficult to detect when a malicious insider is preparing to steal data or launch a cyberattack. Most businesses are struggling to identify and detect early indicators that could suggest an insider is plotting to steal data or carry out other cyberattacks.

Ransomware Attacks Soar 288% in First Half of 2021

The number of ransomware attacks surged by 288% between the first and second quarters of 2021 as double extortion attempts grew, according to the latest data from NCC Group. The firm claimed nearly a quarter (22%) of data leaks in the second quarter came from the Conti group.

How to combat the latest security threats in 2021

2020 saw a boom in cyberattacks with cybercriminals taking advantage of the coronavirus pandemic and lockdown to stage ransomware campaigns, deploy malware, exploit vulnerabilities and commit data breaches. Though we're now in a new year, bad actors are not only likely to deliver more of the same but find new ways to carry out their attacks.

How To Prevent A Data Breach In Your Company

It's hard to project the cost of a data breach since "data breach" is a generic term that can refer to a wide range of different incidents. But according to a 2020 report from IBM and the Ponemon Institute, the average cost of a data breach worldwide is \$3.86 million, and in the U.S., that cost is \$8.64 million.
